PROFILE

I am a passionate software developer skilled in HTML, CSS, JavaScript, Java, Python, and TypeScript. I have experience building web and mobile applications, including projects like a POS system, crop monitoring dashboard, and a library management system. I focus on creating clean, responsive designs and efficient solutions.

PROJECTS

Crop Monitoring System

System for farm

The Crop Monitoring System is an enterprise-level web application designed for Green Shadow (Pvt) Ltd, a mid-scale farm specializing in root crops and cereals. This system aims to streamline the management of various farm operations, including crop cultivation, resource allocation, monitoring logs, vehicles, and equipment. The system provides role.

Using HTML, CSS, Java Script and MySQL

Library Management System

System for library

The Library Management System is an enterprise-level web application designed to streamline library operations for educational institutions and organizations. This system provides an efficient way to manage books, members, borrowing activities, and role-based access control.

Using TypeScript, JavaScript, CSS and MySQL
